To Meghan Wahlstrom:

I am shocked that an agency charged with protecting the environment would even consider aqua pens and any associated systems in our waters. Aqua farms are toxic, full of concentrated fish pollutants, and sick and diseased fish. The intensive practice is the problem in the first place. It leads to unnatural, biologically dangerous environments that do not belong in our already over-polluted waters.

Please do not consider aqua pens in our waters. We need to protect our oceans and waterways, not further deplete and pollute them.

Thank you.
